

Aquatec Walkway & Platform

A new way to access your tanks and production area in an environmental friendly material without maintenance

Profiles made of composite – Glassfibre-reinforced plastics (GRP) - today provide an alternative to conventional structural materials such as concrete, steel, aluminum and wood.

Used for structural purposes, composite has the advantage of combining a number of properties not usually found together in a single material.

In particular it combines high strength and low weight, while at the same time it is non-corrosive and has thermal and electrical insulation properties. It can also be machined like wood using diamond-tool equipment.

We use it for Walkways, Platforms, Stairs, Planks and Gratings etc.
